

Achieve clean results quickly in bathrooms.

Quick and economic for bathroom and kitchen renovation. Use the Fein MULTIMASTER to replace individual tiles without damaging the surrounding ones. With the diamond saw blades or carbide blades, the FEIN MULTIMASTER cuts tile grout with the utmost precision and the minimum of dust. The old tile adhesive can then be conveniently removed with the carbide rasp or scraper blade.

1. Removing tile joints:

The segment saw blade is used for removing defective tile joints in corners and on edges accurately and without overcutting. It is available in carbide or diamond quality; the latter will impress you with its noticeably higher service life and is also suitable for epoxy resins.

Order number
6 35 02 118 01 6 Carbide segment saw blade
6 35 02 114 01 7 Diamond segment saw blade

2. Sanding supporting surfaces flat:

The carbide rasp is the all-around accessory for tiling. It smoothes adhesive glue, sands edges and ensures a flat supporting surface.
